- 2 spare batteries
- Extra curly communication cable
- Rapid desk top charger
- Bluetooth option available

Allflex PNL 4060 Panel Reader

- Powered from a 12 volt battery with an option for 240v
- Connects directly to weigh scales or computer
- Pre-drilled for easy attachment
- Robust yet very light and easy to transport
- Fitted with a tuning ammeter, power indicator, read indicator lamp and beeper volume control.

NLIS

Electronic Identification Products

Allflex provides superior product design and performance, reliable on-time delivery in full, dedicated technical support and exceptional customer service. Use Allflex to manage your livestock and identify the difference.

Identify the Difference®

Allflex Australia

For over five decades, Allflex have provided and supported the Livestock Identification industry with management systems that provide:

- superior product design and performance
- reliable on-time delivery in full
- dedicated technical support
- exceptional customer service

Allflex operates worldwide and has a presence in all major animal production markets. Allflex is ISO 9001 accredited ensuring continual improvement of its systems and maintaining and delivering the highest quality products and services.

Use Allflex to manage your livestock and identify the difference.

Matching Management Tags

Allflex Matching Management Tags offer a matching visual tag for easy paddock, pound or race identification that corresponds with your NLIS tags.

Identify the difference:

- Allflex Matching Management Tags are produced in conjunction with your electronic tag, cross referencing the 5 digit management number marked on the electronic tag.
- The Matching Management tag can also include your company name, logo, brand etc
- Matching Management tags can be supplied in various colours for year identification or simple colour coding.
- Allflex Matching Management Tags are ordered with your NLIS Devices and will be packaged conveniently together to ensure both tags can be quickly and easily applied.

DNA

The DNA Tag system provides a simple but effective means of integrating animal identification with DNA technology. Through our partnership with Genetic Solutions you can accurately and permanently identify animals using a combination of mandatory NLIS ear tags, a Matching management tag and a Genetic Solutions DNA Sample Collector that are cross referenced with a unique code.

The Allflex DNA tag completes the most secure circle of animal identification by integrating Visual, Electronic and now DNA technology for complete livestock identification.

Applicators and Application tips

Allflex Universal Applicator

- The Allflex Universal Applicator is an essential tool for the application of all Allflex 2 Piece Tags.

Allflex Ultramatic Applicator

- Designed with an automatic pin release to reduce snagging and ensure quick application

Important Note:

The correct applicator must be used when applying NLIS tags. A failure to do so will affect the efficacy of a NLIS device.

National Livestock Identification Scheme (NLIS)

NLIS is Australia's system for the identification and tracing of livestock. It is a permanent whole-of-life identification system that enables animals to be tracked from property of birth to slaughter for food safety, product integrity and market access purposes.

Allflex Australia is an accredited manufacturer and supplier of NLIS tags.

www.crtkyneton.com.au

Identify the difference:

- Ensure animal's parentage with genetic heritage tests
- Determine marbling & tenderness potential
- Optimise the effort you put into animals
- Increase the value of your animals with guaranteed DNA testing
- Ensure stock security - every animal has a unique DNA fingerprint
- Manage the efficiency of your herd
- Hair sample useable almost indefinitely
- Simple to use - collect the sample when the tag goes on
- Ensure consumer safety with quality, traceable production

- Tag placement per diagram, middle section of ear and as close to the head as practical.
- Do not remove NLIS tags from previously identified cattle or attach a second NLIS tag
- Tag MUST be applied to right side or offside ear
- Female RFID tag MUST be applied to the front of the ear
- It's recommended that animal be appropriately restrained and that the applicator is clean.
- Once the applicator is loaded dip both parts of the tag into an antiseptic or disinfectant solution.
