

# ACCESSORIES

You don't need to be a professional to do a professional fencing job. All you need are the right tools and accessories. Because everything in the Waratah range is made to work together, you save time and money putting up a fence.

- Innovative range of fencing tools made to the highest standards and built to last
- Designed to make fence construction and maintenance quicker, simpler and safer.

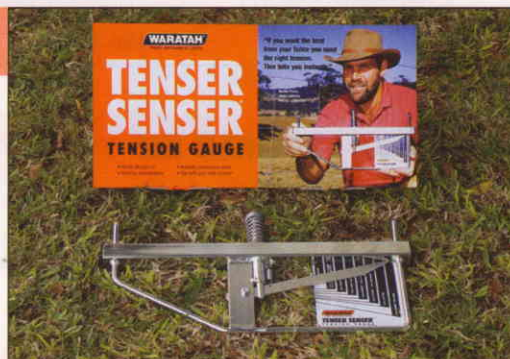

## THREE-WAY WIRE SPINNER

This multi-purpose wire dispenser is suitable for safely spinning out plain wire and barbed wire. It can be rolled along the fence line and used as a 'hand cart' for barbed wire. Double cradle wire spinners are also available.

## TENSER SENSER® WIRE TENSION GAUGE

This all-purpose gauge lets you test wire tension instantly. It shows correct tensions for most Waratah wire products at a glance, covering plain, barbed, high tensile, soft wire products and includes prefabricated Waratah fence systems.

## WIZARD® WIRE STRAINERS

Wizard® Wire Strainer grips securely to help you tension fence wire. It can be firmly attached around the strainer post and is the most efficient method for tensioning plain and barbed wire.

3 metre chain can be purchased separately.

## WEDGELOCK® CLAMP

The Wedgeloek® clamp is used when straining prefabricated wire. It creates a secure clamp on the wire, holding it in place while the Wizard wire strainer (which is designed to perfectly fit the Wedgeloek clamp) tensions the wire. Available in 1m, 1.3m, and 1.6m (available on request).

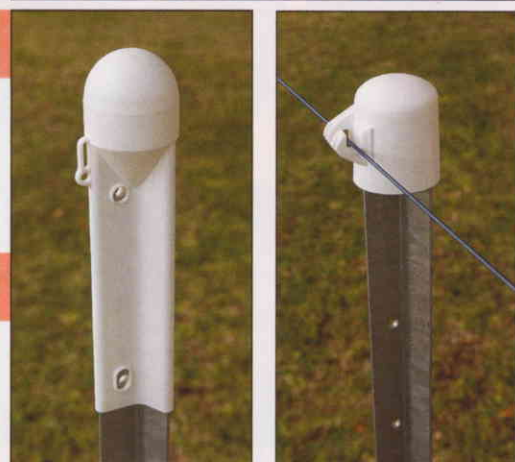

## **GALSTAR® POST DRIVER**

An easy way to install Waratah GalStar® Posts, with less effort and more speed. The 9kg head provides more driving force than smaller hand operated options.

## **GALSTAR® POST CAPS**

The Waratah GalStar Post Cap has 3 benefits – it insulates electric fence wire, it makes the post more visible and it makes the post safer.

## **GALSTAR® POST INSULATOR CAPS**

A economical alternative to the longer post caps (above), the post insulator caps feature a large tracking distance to inhibit power leakage on electrified wires.

## **GALSTAR® POST CLIPS**

Made from Waratah Longlife coated 3.15mm wire, these fence post clips are easily slipped through holes in Waratah GalStar Posts with the wire placed in the legs of the clip, which is then twisted around the wire with the special fastening tool supplied in every bag of 300 clips.

## **GRIPPLE® PLUS WIRE JOINERS**

Waratah's unique Gripple® Plus wire joiners save time and effort when joining wires, tensioning or terminating wire at a strainer post. Wires are simply pushed through the Gripple Plus joiner in each direction and the one way grip means each wire is firmly held. Gripple Plus Medium or Large wire joiners are exceptionally long lasting and can be reused. Now with its patented ceramic locking mechanism it delivers stronger grip taking higher loads and providing superior corrosion resistance. The Gripple Plus Medium can be used on wire diameters from 2.00mm to 3.25mm with a loading of 3.91kN/400kg line tension, and the Large caters for 3.25mm to 4.20mm with a loading of 5.8kN/600kg line tension.

## **GRIPPLE® PLUS TENSIONING TOOL**

The Waratah Gripple® Plus tensioning tool makes tensioning wire even more of a breeze. It delivers a 6:1 mechanical advantage that can generate up to 400kg/4kN of tension. This brilliant tool also has excellent ergonomics – it's strong and compact and weighs only 750gm, making it easy to handle, operate and carry.

- Durable steel inserts are heat-treated for tough work
- Makes tensioning and re-tensioning simple
- Grips wire and allows the Waratah Gripple® or Gripple® Plus to be moved, allowing tensioning and adjustment
- Strong and compact through use of high-performance engineering-grade polymer.
